Overview

Introduction

Our case

Data

Requirements

Conclusions

References

Teaching cases

- Constructivist teaching method based on **cases** (different from “case studies”);
- Cases present a situation (or problem space) not necessarily taken from real life;
- No solution is provided but it is up to the learners to generate possible solutions that might fit the facts of the case;
- By challenging yourselves, you explore the case to **make a decision** or **solve a problem**;
- Meanwhile, you acquire **specific skills** and **knowledge** through inquiry.

Strategy

What you'll do:

- Reason critically;
- Propose appropriate courses of action.

What you'll use:

- Your own understanding;
- Your values, perspectives and ideas;
- Your knowledge and background.

What you'll need to develop:

- An analysis of the problem;
- A “plan of attack”;
- One or more possible solutions.

What you'll cultivate and get:

- Analytical skills;
- Critical thinking;
- Ability to identify issues as they arise;
- Ability to evaluate information;
- Ability to extract informative data;
- Collaborative skills.

Teamwork

How will you do this?

- Discussions;
- Group projects;
- Cooperative learning;
- Individual research.

InterLibrary Loan Service (ILS)

A service that allows you to borrow books, music sheets, CDs, DVDs and other items not only from your library, but **from all libraries** in the network.

ILS - How it works?

1. The user makes a request to his or her home library, in person or through an online catalogue on the system;
2. The request is received and accepted by one of the libraries having the desired item;
3. This second library prepares the desired item, which is subsequently collected by a courier;
4. After a while (usually a few days or a week), the courier delivers the desired item at the user's home library, which notifies the user that the item is ready.

Our case - RBBC

Rete Bibliotecaria Bresciana e Cremonese (i.e., RBBC, Brescia and Cremona Library Network)

- *Network*: composed of the public libraries in the provinces of Brescia, Cremona and Mantova;
- *Channels*: to use ILS, the user can ask directly to his or her home library or use the *Online Public Access Catalogue* (i.e., OPAC) platform;
- *Price*: completely free for users.

RBBC - Online Public Access Catalogue (OPAC)

The screenshot shows the RBBC (Rete Bibliotecaria Bresciana e Cremonese) OPAC homepage. The header is red with the RBBC logo on the left, the name 'Rete Bibliotecaria Bresciana e Cremonese' in the center, and navigation links like 'Logout', 'Aiuto', and language flags on the right. Below the header is a search bar with 'Ricerca nel catalogo' and a 'Cerca' button. A secondary navigation bar contains links like 'Home', 'Catalogo', 'Ragazzi', 'Sezione Locale', 'Generi fiction', 'Classifiche', 'Consigli di lettura', 'MLOL', 'Chi siamo', and 'Archivi'. A statistics bar shows 'Prestiti in corso 256.209', 'Prestiti di oggi 1.590', and 'Iscritti alla RBBC 183.824'. A large banner for 'Laboratori creativi 2020' features various craft icons and text about workshops from February to May. On the right, a 'Ultimi arrivi' section displays book covers for 'Mercato nero' by Gian Mauro Costa and 'La fiamma nel buio' by Michael Connelly.

Ultimi arrivi Vedi tutti

Mercato nero Gian Mauro Costa

La fiamma nel buio Michael Connelly

- After logging in, the user can see its current situation in the “MyDiscovery” section;
- The user can look for any resources in the network.

RBBC - Booking a resource online

- In this case, the user can select the delivery library, i.e., the user can choose where he or she would like to collect the desired item (**not** the library where the desired item will come from).

RBBC - More details about the requests

- Every resource is **owned** by a particular library, but it can actually be requested by users all over the network;
- The user can **request any resource** not labelled as “local loan” (i.e., only users of the owner library can borrow the resource);
- **Duration of interlibrary loan:** 30 days (books and media kits) or 15 days (magazines, DVDs and music);
- Every user can borrow **at most 10 resources** at the same time.
- The user can **return the item to any libraries** in the network (not necessarily where he or she borrowed it).

RBBC - The couriers

- RBBC uses a service provided by a **logistics company**;
- By contract, the company offers a maximum number of **couriers to move items** from one library to another: RBBC pays some **fixed** amount for the rental of vehicles, plus some **variable costs** related to the length of the routes travelled by couriers;
- Couriers are supposed to **visit each library on a regular basis**, tentatively on the same day of the week, usually during their opening hours. It may also happen during lunch breaks or when the library is closed to the public;
- When couriers visit a library, they simultaneously **pick-up** all items that have to go somewhere else and **deliver** all the ones addressed to that library;
- They do not deliver items immediately after pick-up, but bring them instead to **depots** located in the network.

RBBC - The network

The network is composed of:

- 329 libraries + 2 offices (i.e., the “Ufficio Biblioteche” of the Province of Brescia and the “Ufficio Biblioteche” of the Province of Cremona);
- Depots to temporarily collect items.

RBBC: Lines

- Currently, libraries are organized in **fixed lines**;
- Each line is served by a courier multiple times a week, according to the demand;
- Couriers start from a depot, then reach the start of the line and visit all libraries assigned to that line until the end, picking-up or delivering requested items; then couriers go back to the depot, where they leave all items picked-up.

- **loan_id**: a value to univocally identify the loan;
- **patron_id**, **patron_age** and **patron_city**: user data;
- **request_date**: when the user makes the request;
- **loan_date_begin** and **loan_date_end**: duration of the loan;
- **due_date**: deadline for the user to return the item;
- **from_library** and **to_library**: pick-up and delivery libraries for the item;
- **end_library**: the library where the user returned the item.

Requirements - Focus

The goal is to **optimize the InterLibrary Loan Service**.

Of course, one cannot think about optimizing right away all the phases of the service; you will focus on the pick-up and delivery parts by developing routes for couriers, while trying to reduce the costs paid by RBBC.

There are **some aspects** to take into account, for instance:

- How many times a week should couriers visit a particular library?
- Where should the depots be located?
- What is the capacity of a vehicle? And are vehicles *homogenous* or not?

Variables, parameters, constraints... Can you identify them in this problem? Thinking about and discussing the problem, you may also find other things to keep in consideration.

Requirements - What you can do

- Provide a **mathematical formulation** of the problem, maybe using linear programming, mixed-integer linear programming or whatever model you think it would be suitable;
- Analyze data using **statistics**, developing charts, figures, etc.;
- Look for similar problems in the **literature** and compare how they have been solved;
- **Implement** your model and use existing solvers to get a solution.

...basically **all you need to understand it better!**

Note: you don't have to strictly follow how RBBC is currently tackling the problem. You have to **stick to the data**, but for instance you may not use lines. You are **completely free!**

Requirements - What we are asking

- We **do not know the exact solution** and we are not asking you to find it (well, if you develop an optimal method...);
- We are looking for innovative **ideas and methods** to tackle this problem, **providing RBBC with new insights and suggestions** about the decisions they have to make, for instance choosing a good logistics company.

Requirements - Tools

- You are free to use **any tools** you prefer;
- You can use methods, techniques and softwares we're going to study in this course, but also others you already know.

Requirements - Final report

- You will act like a **real consultant** for RBBC;
- In the end, you'll need to develop an **appropriate report**, containing:
 - How you have studied the problem;
 - Analyses you have done;
 - Methods you have developed;
 - What you suggest to RBBC to improve its management of the ILS, according to your results;
 - Everything else you think it's relevant.

Conclusions

- If you have any questions, don't hesitate and write to us!
- We are in contact with the IT manager of RBBC, thus we can share with him all doubts and issues, or things we are not convinced of;
- We'll guide you through this path and in the development of your work.
